Company Description

Eastman is a global specialty chemical company that produces a broad range of products found in items people use every day. With a portfolio of specialty businesses, Eastman works with customers to deliver innovative products and solutions while maintaining a commitment to safety and sustainability.

Markets Served

Eastman's market-driven approaches take advantage of world-class technology platforms and leading positions in end-markets. The company is divided into five business segments including additives & functional products, adhesives and plasticizers, advanced materials, fibers and specialty fluids & intermediates. Its major end markets are transportation, building & construction, consumables, industrials & chemicals processing, durables, and health & wellness. Eastman is committed to delivering innovation and solutions for multiple applications. For more than 70 years, it has been a leading provider of high-quality raw materials, offering one of the most diverse product portfolios in the coatings industry.

Technologies

Cellulose esters: rheology modification, defect control, color consistency.

Coalescing aides: maximum film formation.

Adhesion promoters: adhesion to modified polypropylene substrates, other plastics.

Solvents: for desired application/performance characteristics.

Resins: for desired solutions to increase performance of a versatile range of formulations.

Resin intermediates: unique structural options for coating resins to meet performance properties.

Additives: faster dry-to-touch time, excellent anti-sag behavior, ease of sanding.

Functional and specialty amines: pH buffers, multifunctional neutralizing amines, controlling pH, pigment dispersion

Technical Services

- Formulation and application expertise in coatings, adhesives, inks, textiles and more.
- Chemistry/chemical transformation and engineering/process design & modeling excellence.

Major Products

Eastman Texanol™ ester alcohol, the premier coalescent for latex paints, provides the highest level of film integrity at low levels of coalescent. Eastman Texanol™ is suitable for all types of latex paints and maintains good performance regardless of varying weather conditions and substrate porosity. Eastman Optifilm™ enhancer 400 is a very low VOC, low odor coalescent that is compatible with a variety of latex types, and maintains a good balance of performance properties. Eastman Tetrashield™ protective resin systems create coatings that protect. Through groundbreaking weathering, chemical resistance, and hardness, Tetrashield resins make coatings more durable while retaining the traditional benefits of polyesters.

Global Capabilities

As a globally diverse company, Eastman serves customers in approximately 100 countries. The company has over 40 production facilities in North America, China, Japan, Korea, Malaysia, Singapore, Taiwan, Belgium, Estonia, France, Germany, Netherlands, United Kingdom, Brazil, Mexico, and the United States.
