## Company Description

Wanhua Chemical is a global leading chemical company, providing competitive products and solutions by leveraging innovative technology, world-class facilities and efficient operations.

Technological innovation being the core competence, Wanhua Chemical has continued the efforts in industrial restructuring and has expanded the business into four fields: polyurethanes, petrochemicals, performance chemical materials and specialty chemicals.

Keeping “Create Value for Customers” in mind as our top mission, the company is committed to providing customers with stable, high-quality and competitive products, as well as efficient services, fulfilling the obligations as the reliable supplier and industry leader.

In the future, the company shall continue the innovation journey in the new chemical world, lead the way for the industry and build a wonderful world for humanity.

## Performance Chemicals

### Premium supplier of high performance chemicals

The production sites are located in Yantai, Ningbo and Czech Republic. Currently the portfolio includes aliphatic products (HDI, HDI adducts, HMDI, IPDI, H6XDI), special amine products (MDA, MDBA, H12MDA and IPDA), organosilicon and special performance chemical products (IP, MIBK, CDT, PU catalyst). Focuses on the demands of our customers and provides high performance and stable quality products downstream so as to improve the quality and competitiveness of the final products.

- Aliphatic diisocyanate products
- Special amine products
- Organosilicon products
- Special performance chemical products

## Material Solutions

Provides value-added services based on upstream materials. Specialize in R&D, manufacturing and sales of environmentally-friendly waterborne surface products and comprehensive solutions.

Six major technological platforms with supporting services: waterborne polyurethane (PUD), waterborne polyacrylate (PA), modified polyurethane (PUA), waterborne UV-curable resin (UV), waterborne two-component resin (2K) and rheological additives (HEUR and HASE).

Widely used in architectural coatings, industrial coatings, adhesives, textile coatings, ecological synthetic leather and personal care products.

Production base in Yantai, Ningbo and Zhuhai, China.

## Polyurethane

### Competitive domestic provider for modified isocyanates

Specialize in R&D development on PU and petrochemical applications.

Products widely used in automobile, home furnishing, textiles, coating, construction and sports gears.

The largest PU R&D base: Wanhua Chemical (Beijing) Research Institute and nation-accredited laboratory.

## Petrochemical

### Trustworthy partner in basic chemical industry

Mainly engage in procurement and sales of petrochemical raw materials.

Current portfolio: liquefied petroleum gas, propylene, butanol, PO, MTBE, NPG, AA, AE, etc.

Products widely applied in building materials, gasoline additives, coatings, adhesives, super-absorbent resins, etc.
