Company Description

Founded in 1981, The Shepherd Color Company produces a wide range of high-performance Complex Inorganic Color Pigments (CICP). These pigments are an extraordinary class of inorganic pigments that offer stable, long-lasting color for many applications. They have unbeatable weatherability, heat and chemical resistance, are non-warping and easy to disperse. If you develop new and innovative paints and coatings, you need differentiated and specialized raw materials. Shepherd Color provides an extensive color tool box for chemists to work with.

NTP Yellow and RTZ Orange

NTP Yellow is a new and patented high-performance pigment in the middle-yellow color space with high opacity, excellent stability, and unmatched chromaticity. RTZ Orange is an improvement in this pigment chemistry with the reddest shades for a true orange color. Together NTP Yellow and RTZ Orange make excellent ultra-high performance colorants for the most demanding applications.

Dynamix®

Dynamix stir-in pigments take out the time consuming, expensive and variable steps associated with pigment grinding. Dynamix is 100% pure color that works in solvent and waterborne coatings. Get Pure Profitability, Pure Consistency and Pure Convenience with Dynamix.

Arctic®

Arctic Infrared Reflective Pigments allow for the design of products that remain cooler under the sun-without sacrificing color. Durable Cooler Color.

StarLight®

Special Effect pigment with MicroMirror technology of silver-coated glass flake used for unsurpassed sparkle and brilliance to create dramatic effects.
